COMET C/2009 K5 (McNAUGHT)

R. H. McNaught reports his discovery of a comet on CCD images obtained with the 0.5-m Uppsala Schmidt telescope at Siding Spring (discovery observation tabulated below), the object being slightly diffuse with a diameter of 10". After posting on the Minor Planet Center's 'NEOCP' webpage, C. Jacques and E. Pimentel (Belo Horizonte, Minas Gerais, Brazil, 0.30-m *f*/3 reflector, May 28.34–28.35 UT) find that the comet shows a condensed coma of diameter 20". G. Sostero, E. Guido, P. Camilleri, and E. Prosperi report that sixteen stacked 60-s unfiltered exposures, obtained remotely with a 0.35-m *f*/7 reflector at the Skyline-Grove Creek Observatory (near Trunkay, Australia) on May 28.5 under good seeing conditions, show that this object has a small, compact coma nearly 6" in diameter, with a hint of elongation toward the northeast.

2009	UT	α_{2000}	δ_{2000}	Mag.	Observer
May 27.60529		19 ^h 45 ^m 35 ^s .31	−74°00′35″.4	17.7	McNaught

The available astrometry, the following preliminary parabolic orbital elements, and an ephemeris appear on *MPEC* 2009-K67.

$$\left. \begin{array}{ll} T = 2010 \text{ Apr. } 18.616 \text{ TT} & \omega = 67.954 \\ & \Omega = 259.967 \\ q = 1.35690 \text{ AU} & i = 101.624 \end{array} \right\} 2000.0$$

COMET P/2009 K1 (GIBBS)

As predicted on *IAUC* 9044, additional astrometry has shown this comet to be of short period; orbital elements from *MPEC* 2009-K48: $T = 2009 \text{ June } 25.934 \text{ TT}$, $q = 1.32261 \text{ AU}$, $e = 0.63948$, $\omega = 27^\circ 086$, $\Omega = 172^\circ 802$, $i = 5^\circ 745$ (equinox 2000.0), $P = 7.03 \text{ years}$.

COMET C/2001 D1 = C/2004 X7 = C/2008 S2 = C/1997 J6 (SOHO)

Further to *IAUC* 8986, R. Kracht has identified very weak images of a presumed comet on SOHO images from 1997 that he and B. G. Marsden have linked (via measurements by K. Battams) to the comets in 2001, 2004, and 2008 with nongravitational forces.
